**Easily Transported**

**Adjustable Tilt in Space**

**Cambered Wheels**

**Hand Brakes**

**\* Seat System Options**

Works with the  
Madiba2Go &  
SullyActive Seats

## Rigid 20 Active Base Frame\*

Our compact active base frame is an excellent mobility option for energetic and curious young children who are able to self-propel and will benefit from independent mobility to explore the world. Cambered wheels improve manoeuvrability and a fold away anti-tipper gives some security against tipping backwards on uneven and steep terrain.

This rigid base frame provides a strong stable foundation for mounting either the Sully or Madiba2Go seating systems, depending on the child's posture support needs.

## **Rigid 24 Active Base Frame\***

This rugged tubular steel frame was developed as a self-propelling mobility base option for users with intermediate and complex postural needs. It is designed to be highly manoeuvrable and yet stable, enabling users with basic mobility skills to safely access both indoor areas and more demanding outdoor terrain.

The base frame can be paired with our Sam Active or Madiba2Go seating systems for users who want an independent manual mobility option. This base frame with the Sam Active seat can also be configured for attendant propelling use.
